No. 1

Noves in Facultate.

Dr. Chase.

Daniel Chase, who recently took charge of the newly formed department of Physical Education here, comes to us from Hamilton College in New York State, where he was physical director and associate professor in hygiene.

Mr. Chase was graduated from the University of Maine in 1908 with the degree of A. B., and took his M. S. at Hamilton in 1910. As an undergraduate he played four years of 'varsity baseball, three years of 'varsity football and hockey. He was selected in his Junior year by most of the Maine papers as all-Maine half-back. He captained the hockey team his third year through a very successful season, and was president of his class the same year. Mr. Chase, aside from his work in collegiate physical education, is interested in rural Recreation, Y.M.C.A. work and chess. When his department is better organized he intends to inaugurate a course in Rural Education for the benefit of those who intend to take up this sort of work after graduation. The director's experience in this work especially fits him for teaching it. For two summers he has been instructor in the School of Rural Leadership at Cornell University.

Besides the innovations already made there are many more under way. Mr. Chase favors association football as one of the exercises for his gym classes, inasmuch as it can be played out of doors till as late as Christmas. The classes in Gym work to begin with are to be restricted to the Sophomores and Freshmen, but in time the requirements for attendance at these classes will be extended to include the two upper classes. At present any upper classman may enroll in the second-year class and may be a member of that class as long as he attends regularly. The Hawley Armory is under the care of the department of Physical Education and student labor will be used as far and as long as it proves satisfactory.

When asked as to the part which the department would play in regard to the teams, Mr. Chase said that for himself the coaching of teams would be a secondary matter to the care of the student body. This year, however, he will take an active part in the matter of training rules for the football men. The most important ones are these: Men should retire not later than 10.30 and others should try and be quiet so as to make sleeping possible after this hour. A strict diet is to be adhered to and the use of tobacco in any form is prohibited. Every member of the squad must report for practice every night. Mr. Chase avers that every candidate will have an even chance with his neighbor for making the team, and that football efficiency is the only thing that can land a place on the team.

It is not to be the policy of the department to oppose inter-class sports, for Mr. Chase believes it brings out the "timid material," but there is to be no interclass contests in any of the sports until the 'varsity schedule has been played. He believes that a sophomore-freshman game should be the feature of a small series of class games.

Another event which Mr. Chase hopes to launch is an inter-fraternity track meet to be held in the armory the week before the Christmas recess. The general idea of the meet is this:

Announcement To Subscribers.

If you are receiving this publication and have not paid your subscription for the year 1915-16 the paper will not be mailed to you after November 15.

The paper is sent as an exchange to High Schools and Colleges and will be continued throughout the year.

To newspapers the "Campus" is complimentary. Address all letters relative to subscriptions, failure to receive copies, etc., to

ALBERT A. BUELL,

Circulation Manager.

A Word from the Wise.

The following words are an extract from "How to Succeed in College," by the late President Buckham of the University of Vermont.

"Go slow in everything except regular college duties until you get your bearings and have a chance to make up your mind and decide your course with some deliberation. It is all a new life and serious mistakes are easily made.

"Keep a discerning eye out on men and choose the right leadership. The new-comer, at first, will naturally be a follower. Go with men whom you carefully approve.

"Seek and accept and cherish the society and friendship of your instructors—especially some of them—those to whom you are drawn. Visit them—confide in them; they will be your real friends—and in college you need such friends.

"If possible don't get behind in your work a single day. Work done when it is due, in proper order and succession to what comes before and after it is worth twice as much, many times as much, as the same work 'made up'. If it is neglected or omitted, make it up at the right time but settle it in your mind that every lost or 'not prepared' recitation or lecture is at least one-half irrevocable.

"Devote a certain reasonable amount of time to recreation and sport—but beware of wasteful games. Have always on your table the best books for reading and the best for Sunday reading. Commit to memory passages from the best literature—especially from the Bible. Go to Church every Sunday morning. But above all; write often to your parents and friends at home and keep ever close and tender the tie which connects you with those who follow you here with their love and prayers, to whom your success will be joy and pride, and who are most happy when they think of you as doing your utmost and best for their sakes."

Alumni Attention.

It will be the policy of the *Campus*, so far as is practical, to print the Alumni Notes by classes. For this reason all are requested to send notes and notices for publication to Walter T. Clark, Alumni Editor, who will classify them for printing. An Alumni Department is never successful unless all cooperate to make it so. If each and every one of the Alumni will do his best this feature of the *Campus* will be a success.

1915 Alumni Notes.

W. T. Ackerman is on his home place.
A. F. Aulick has secured work as orchardist on Bridgeport's City Farm.
T. R. Bailey is at his home in New Haven.

G. R. Blake worked during the summer in the market-gardens of Maryland. He is at present working on the new faculty cottages.

H. E. Blackledge is doing his favorite Horticultural work on an estate at Greens Farms.

M. K. Cadwell is working for the American Sugar Co., at Habana, Cuba.
H. B. Ellis is at his home place in Ansonia.

E. P. Farnham is working at the college for the Experiment Station. During the summer he had charge of school-gardens in New London.

E. H. Geer, Jr., is in the chicken business at his home in Hadlyme.

B. R. Graves is at his home in Northampton.

F. W. Hastings when last heard from was beating his way through the Kansas wheat fields.

M. R. Young is running a jitney from "Willy" to the College.

L. H. Healey, Jr., is managing a general farm in Simsbury.

W. P. Langdon is at his home in Bantam.

Leo Marks is at the head of the newly-created course in Agriculture at the Glastonbury High School.

W. A. Morgen is at his home in South Norwalk.

E. H. Nodine is working on a poultry farm near Watertown.

E. E. Ragna has secured a position as instructor in Agriculture at an Institute for deaf-mutes in New Jersey.

Henry Schmitz is working for the Ansonia Water-Works Co., at their stock farm.

L. W. Seggel has entered the Oregon Agricultural College as a senior in Forestry.

R. M. Starr and A. B. Torezken are both taking P. G. work at Michigan Agricultural College.

1915 Football Schedule.

Sept. 25—Worcester Pol'y at Worcester.

Oct. 2—Stevens Inst. at Hoboken.

Oct. 9—New Hampshire State at Durham.

Oct. 16—Fort Wright at Storrs.

Oct. 23—Fordham at New York.

Oct. 30—Open.

Nov. 6—Columbia at New York.

Nov. 13—Boston College at Storrs.

"THE COLLEGE."

To all who have entered Connecticut as new students the *Campus* extends a most hearty welcome. That you may be successful is our sincere wish.

Most men in this world have but one chance. It has been said that opportunity knocks only once. NOW is your time and never in the history of the college have there been so many activities to join in as there are today.

It has been proven unwise, except in occasional circumstances, for a man to enter more than one sport or activity and succeed in them all. It is far better to be a master of one trade than a dabbler in many.

Choose then in your freshman year where your talent will go and make up your mind to follow that line until you are at the top.

If you have militaristic tendencies put your spare time on the study of your Drill Regulations, or in the shooting-gallery, for in spite of the fact that the students quite generally slight the drill, a conscientious man is never left in the ranks. If you have musical ability you belong in the Glee and Mandolin Clubs or in the orchestra. If you admire Charlie Chaplin you may fit in with comedians and villains of the Dramatic Club.

But most of all do not neglect the support of the *Campus*. This is the means by which the Alumni are kept in touch with the college. An institution is judged in the college world by its athletic teams and its publications. We are not at the top of the heap but we are going up. If you wish to try out for the *Campus* board, hand your name to one of the editors and receive an assignment.

In a college as elsewhere a man is seldom taken at his declared worth. To gain a place in the Hall of Fame you must make a reputation and then keep it. Just so here at Connecticut. Remember that a college freshman is not a prep-school senior and act accordingly. You will have plenty of opportunities to show your worth and we will act as the judges.

NOVES IN FACULTATE.

Continued from page 1.

There are to be six events and every member of each club must compete in each event. The scores of the individuals from each club is then added up and divided by the number of men in the club. In this way the club having the highest average score for the individual wins the meet.

Mr. Chase is well impressed by the place, and is pleased with the freedom of action which has been given him. The library has co-operated and put several books on its shelves in connection with the classes in public and private hygiene which the department is giving to new men. There is also a book on "Football for the Player and Spectator", which Mr. Chase recommends to the football fan and the player.

Dr. Sinnott.

Edmund W. Sinnott, professor of Botany and Genetics, received his Bachelor's degree at Harvard in 1908 and spent four years in graduate work. He was in Australia for a year as a fellow of his University and made some valuable collections. When he returned he took up work in the Bussey Institution where he was an instructor in Forestry.

The policy of the department will be much the same as it was under the leadership of Dr. Blakeslee, the time being divided between instruction and experimentation. Dr. Sinnott is more interested in the higher forms of plant life than Professor Blakeslee was and as a consequence his experiments will deal chiefly with the physiology of trees and shrubs along with some research work in Genetics. The Botanical Garden will be continued as usual with practically the same arrangement as now in vogue.

Professor Sinnott is very much pleased with the equipment of the laboratory and feels it is sufficiently well supplied with the requisites of good instruction and careful work in investigation. He is enthused with the natural beauty of the college and says it is the finest country he has met with in New England. He is impressed with the progressive spirit which predominates in the faculty of the college and by the way in which the students take hold of the work in his courses. Dr. Sinnott remarked that if the college was as satisfied with him as he was with the college, his coming here was bound to be a success.

Mr. Torrey.

George S. Torrey, who graduated from Harvard in 1910 with an A. B. degree, pursued the study of Botany in the same school and received his A. M. last spring. At present he is a candidate for a Ph. D. He came to Connecticut this fall as instructor in Botany.

Mr. Torrey is especially interested in the Fungi and is at present conducting several experiments on the intestinal parasites of some insects. He feels that this country is a natural working ground for a Botanist. The hearty manner in which he has been received and the aptitude of the students for grasping the class work, are the two things which have impressed Mr. Torrey the most.

Mr. Duffee.

Mr. Floyd W. Duffee came to Connecticut this fall to establish himself in a very busy department. He is to have charge of the courses in Agricultural Engineering and Farm Mechanics. He specialized in Agricultural Engineering at Ohio State University where he was graduated in 1915.

The farm machinery building at present is nowhere complete as regards equipment, but Mr. Duffee explained that since the equipment in the main is donated by the manufacturers, the recipients are somewhat at the mercies of the donors, and it will take time to equip the building as the department intends to have it. Mr. Duffee being an agronomist, believes that the most popular instructor in the long run is the one who gets his men to learn the most. He is conscious of the reputation of the Agronomy Department at the college, and promises to do all he can to keep up his end of it.

The Better Way.

A worthy acknowledgment of the better way to do dairy cleaning is found in the recognition given

by Dairy Colleges and Dairy Authorities.

Almost to the man, State Dairy Authorities and Inspectors advise the use of this special dairy cleaner.

The better way, made possible by the sanitary cleaning ingredients of Wyandotte Dairyman's Cleaner and Cleanser, meets the approval of 85 per cent. of all butter and cheesemakers. Hundreds of dairymen, milk dealers, and creamery patrons likewise approve of the better way for they, too, depend upon "Wyandotte" for their dairy cleanliness.

If you are not acquainted with the better way, why not ask your dealer or write your supply man for Wyandotte Dairyman's Cleaner and Cleanser. They will gladly supply you with the understanding that it will prove to be all that is claimed for it. Otherwise the trial will cost you nothing.

J. B. Fullerton & Company

THE AGRICULTURAL CLUB AT
CONNECTICUT.

By L. F. Lawrence, '17.

It seems fitting, under the circumstances, to take a little time and space in which better to acquaint our new men with the Agricultural Club—its purpose, aims and ideals.

It is difficult to say just where and when the germ of the Agricultural Club came into existence. Probably it had always existed—all it needed was a little stimulation.

That stimulation came to the Connecticut Agricultural College at an indefinite period—probably in the latter part of 1907 or the spring of 1908. From all appearances the stimulus was not strong enough or the time was inopportune. At any rate, the idea, or rather the suggestion, failed to mature.

The seed had been sown, however, and three years later it bore fruit. A few of the men had been interested in the formation of a club and had worked hard to achieve that end. In the early spring of 1911 a letter was received from the New England Federation of Agricultural Students, urging that a delegate be sent to the convention soon to be held at Durham, N. H.

By this time the students had become convinced that an Agricultural Club was an essential to the development of the college and this letter served to fix the idea.

On the 21st day of March, 1911, a meeting was called for the purpose of organizing and to elect a delegate to the convention. Quite a number of the fellows turned out and an enthusiastic meeting resulted. President Beach and Professor Truman were present and aided materially with their valuable suggestions. A delegate was elected and after plans for the new club had been discussed, the meeting adjourned.

The club seemed to fill a long-felt want of the students and was enthusiastically received. On May 3, a constitution was read, adopted and signed by thirty-five charter members. Such were the beginnings of the Agricultural Club of the Connecticut Agricultural College.

Assuredly, the Agricultural Club need not offer an excuse for existing in any agricultural college. It is as essential to a college like ours as is a Political Club to a political party. The two go hand in hand and the presence of one is of incalculable value to the other.

The preamble of the constitution adopted in 1911 reads as follows: "We, the members of the Connecticut Agricultural Club of the Connecticut College, in order to secure a higher degree of social, literary and scientific knowledge, to discuss agricultural topics and familiarize ourselves with the use of Parliamentary law, do ordain and establish this constitution and the by-laws."

The Agricultural Club of today goes

Guaranteed To Kill
Every Scale
It Reaches.
What?

More Feed Per Acre

The cost of producing meat or milk would be much less if it required less acres to produce the feed. Both the *quantity* and *quality* of the feed improve when the right plant foods are used to supplement the manure and clover. They improve enough to yield a *handsome profit* on the expenditure. The right plant food includes enough

POTASH

in available form. Supplement the manure and phosphate with 50 to 100 pounds of Muriate of Potash, or 200 to 400 pounds of Kainit, per acre, and you will raise big corn and fine clover after the grain and at the same time improve the fertility of the soil.

Try Potash salts alone on the swamp land pasture and note the clover and good grasses crowd out the wild hay. Write us for prices of Potash, one bag up.

GERMAN KALI WORKS, Inc., 42 Broadway, New York

Empire Bldg., Atlanta, Ga. 25 California St., San Francisco

farther than that. It is the Agricultural Club that gives to Connecticut the seat of the Convention of the New England Federation of Agricultural Clubs and thereby recognition among the agricultural colleges of the country; it is the Agricultural Club that sends the judging teams to Brockton for the Live-stock Show, to Worcester for the Corn and Fruit Show, to Boston for the Poultry Show and finally it will be the Agricultural Club that will send a team—the first team to go from Connecticut—to the next National Dairy Show at Chicago.

The Club also makes provision for the entertainment and education of those not fortunate enough to make the

judging teams. Each Fall a Corn and Fruit Show is held and in the spring comes a stock-judging contest. Both of these affairs, while of but recent origin, have been appreciated by the students and it is the aim of the Club to continue them this year with the addition of several new features which will undoubtedly make them doubly attractive.

In a brief way we have attempted to outline the aims of the Club. They are quite feasible and with the wholehearted coöperation of the students, the year 1915-1916 will go down in the annals of the Agricultural Club as one of, if not the most successful in its history.

DE LAVAL SEPARATORS

are by far the most Economical.

REAL ECONOMY is never short-sighted. It never confuses **PRICE** with **VALUE**.

PRICE is what you pay for an article.

VALUE depends upon the amount and quality of service the article gives you.

YOU GET by far the greatest actual value for your money when you buy a De Laval—**BECAUSE** a De Laval will give you much better and longer **SERVICE** than any other cream separator.

From the standpoint of its greater durability alone the De Laval is

the most economical cream separator to buy, and when you also take into consideration its cleaner skimming, easier running, greater capacity and less cost for repairs, the price of the "cheapest" machine on the market is most exorbitant compared with that of the De Laval.

AND there is no reason why you should let its **FIRST COST** stand in the way either, because the De Laval may be purchased on such liberal terms that it will actually pay for itself out of its own savings.

A De Laval Catalog, to be had for the asking, tells more fully why the De Laval is the most economical cream separator, or the nearest local De Laval agent will be glad to explain this and many other points of De Laval superiority. If you don't know the nearest local agent, simply write the nearest De Laval main office as below.

Mogul 8-16 Oil Tractor

\$675.00 Cash f. o. b. Chicago

THE small-farm tractor is here to stay.

Farms even smaller than 100 acres are rapidly being equipped with **Mogul 8-16** oil tractors. Since their introduction, the great plant at Chicago has been turning out these machines by the thousands and is still behind orders.

There is only one reason for this unprecedented demand. Tractor farming pays. Horse boarders are cut down to the small number required for cultivating and the few other jobs for which tractors cannot be used. The plowing, disking, seeding and harvesting are finished without relation to the effect of weather on horses. Costs are reduced all 'round. Net farm profits are higher. Tractor farming pays well on small farms when the work is done with a **Mogul 8-16**. The longer you put off buying one, the more money you lose.

The **Mogul** and **Titan** lines include larger tractors to 30-60 H. P., all operating on low grade oil fuel, and a full line of general purpose oil engines, from 1 to 50-H. P. in size. See the local dealer who handles these machines or write us for full information.
