WHERE TO GO AND WHAT TO SEE
ON YOUR SUNDAY AFTERNOON
WALKS.

THE STAND-PIPE.

Beginning right at the college the most conspicuous object on the landscape is the stand-pipe on Savage's Hill. A few figures relative to this structure will perhaps not be amiss. The capacity of the tank is 800,000 gallons of water and the pressure at the lowest point where water is supplied is about 80 pounds per square inch. The water comes from a well 850 feet deep, 250 feet below sea level and contains nothing but a few mineral salts in solution besides the usual H₂O. The foundation of the stand-pipe is at a height of 615 feet above sea level and that brings the total height at the platform on top to 800 feet approximately. While the tower is actually painted a battleship grey various suggestions were made at the time of its construction for a more bizarre decoration. It might have represented an immense stick of candy or a barber's pole, the roof might have been left a brilliant red or gold-leaved if some of the suggestions had been adopted. The telephone line to the tower is for use in case of forest fires, as in dangerous seasons an observer visits the tower several times a day. An idea of the area in the range from the tower may be had by looking up the following towns on a map of the State: Mansfield, Willington, Ashford, Chaplin, Windham, Lebanon, Columbia, Hebron, Bolton, Vernon, Tolland, Eastford, and Hampton are in plain sight while high points in Glastonbury and Stafford may also be seen.

THE OLD CEMETERY.

While on your way to the tower stop at the old cemetery by the church and read some of the quaint inscriptions which the old settlers delighted in composing. Here for instance is a cheerful thought:

"Pause, young friend, as you pass by,
As you are now so once was I;
As I am now so you will be,
Prepare for death and follow me."

MASON'S MILL.

Taking the road to the right at Mr. Savage's house and turning down the old Boston Post Road at the corner where the schoolhouse recently burned we come to Mason's Mill on the Fenton river. The old gentleman who has the courage to still keep the wheels turning will be glad to show his collection of old coins to any who are interested.

DAWLEY FALLS.

About a mile west of Daleville is a spot quite favored by the students a decade or so ago. The upper waterfall is about twenty feet wide and ten feet high and some distance below the brook falls over a series of steps and

(Continued on page 2)

Rural Organization

The industrial revolution in the last century, ascribed by economists and publicists to the introduction of steam and electricity in the world's work applied to transportation and communication, has not only transformed the lives of urban population, but has created a world market for agricultural products and profoundly changed the conditions of rural life. Formerly the markets were local and restricted; now they are unlimited and universal. Formerly each little community was sufficient unto itself, dependent upon itself, and consequently restricted to the conditions of a meagre and frugal existence. Now the local community articulates with the world at large, and as it contributes to the economic life of the world, so it in turn draws sustenance from the great outside world and is dependent upon it. The farmer's table, as well as that of the laboring man in the city, is supplied with food contributed not only from various sections of our own great Country, but from remote countries and continents. The local community is, therefore, no longer isolated as it used to be; it is no longer left alone to develop or decay according to its own individual inclination. It is of necessity a vital and integral part of the great world-life and develops or decays in ratio with the great outside world with which it is connected.

The Pre-emption and Homestead laws, which have been a part of the public land policy of the Federal Government fostered an individualistic method of settlement. Undoubtedly these laws served important public purposes, but they also tended to promote disorganization rather than organization. Lately, for instance, the tendency has been to take the roads and schools out of the hands of local units and put them directly under county and State administration. This connection of administration has no doubt resulted in greater efficiency, but it also tends to destroy the old basis of rural organization. No doubt this centralizing process will go on until the entire school system of the State is administered as a unit and every country child is provided with as good a school as any city child. Organization and the centralization of power are features of present-day social economic and civic development. Personal and communal individualism is disintegrating and passing away, while greater social efficiency is secured by greater organization and administration.

Beginning with the Granger movement of the late sixties and the early seventies of the last century, the Country has witnessed a series of movements, some ephemeral and some lasting, until at the present time we have the National Grange, which is the

(Continued on page 3)

Graduate School of Agriculture

TO BE HELD AT M. A. C. THIS
COMING SUMMER.

Every two years, under the auspices of the Association of American Agricultural Colleges and Experiment Stations, there is conducted at some college in the country a summer school for graduate study in agriculture. This school is conducted for the benefit of those desiring to study the more recent developments in natural, social, and economic sciences, applied to agriculture, as well as in technical branches of the so-called practical agriculture. The purpose of the school is to give the students such an outlook toward agricultural problems as will lead them to undertake graduate study as opportunity may be offered. This school appeals particularly to seniors and younger alumni, who are or who hope to be engaged in professional work in agricultural subjects.

The seventh session of this school is to be held at the Massachusetts Agricultural College from July 3rd to 28th. This is the first time that the Graduate School of Agriculture has held sessions in the east, and the agriculturists of New England are fortunate to have such easy access to the Graduate School. Massachusetts has given graduate courses since 1890 and is well able with its instructors and equipment to conduct such a school.

The courses of instruction will be arranged under the three general heads of the factors of growth of plants and animals; agricultural economics and rural sociology; and fundamental problems of intensive agriculture, including agronomy, horticulture, and dairy husbandry. Each of these courses will consist of twenty lectures and about twenty seminars. At the seminars, which will be carefully organized with reference to purposes of graduate instruction, the subjects treated in the lectures will be further developed by additional experts and submitted to members of the school for discussion.

Through excursions and otherwise, typical features of the agricultural developments and community life of the region in which the college is located, will be utilized in connection with the courses of instruction of this graduate school.

The faculty will include leading scientists and experts from the U. S. Department of Agriculture, the agricultural colleges and experiment stations and other universities, colleges, and scientific institutions in America and Europe.

The Graduate School of Agriculture had its origin in a growing demand from instructors in agricultural colleges and workers in agricultural ex-

The Eastern States' Exposition

SPRINGFIELD THE MECCA OF
STOCK-MEN NEXT FALL.

The Eastern States Agricultural and Industrial Exposition is a get-together of city and country forces to advance agricultural and industrial prosperity and to insure living conditions adequate to realize the highest ideals for the people of New England.

The alarming decline of agriculture in New England and the Eastern States, with the growing industrial competition of the Middle, Western and Southern States, has brought the Northwestern section of the United States face to face with a most serious problem. The future industrial prosperity of New England depends to a very large degree on a prosperous agriculture. The Eastern States Agricultural and Industrial Exposition, with other organizations and forces, is uniting the agricultural, business, industrial, transportation and banking interests in a great forward movement to make agriculture and country life prosperous, to enable New England to produce what New England consumes, thus adding new life, prosperity, and happiness to our cities and towns alike.

A tract of about one hundred and seventy acres, within twenty minutes' walk of the Springfield post-office, has been purchased and is being developed by the Eastern States Exposition. The corporation is capitalized at \$750,000 to furnish an adequate plant and working force to carry out its great program. The proposed buildings afford about 500,000 square feet of floor space. The principal building will be a coliseum containing a covered arena two hundred by one hundred feet and having a seating capacity of five thousand, five hundred persons. Other principal buildings will include one for dairy products and machinery, a horticultural building, an agricultural building, a poultry building and a cattle and horse show building with accommodations for two thousand animals. There will be several acres of open and tent space devoted to farm machinery, tools, implements, etc. Also a large fertile area devoted to demonstration plots in grasses, grains, orcharding, etc.

This year as an especial attraction the National Dairy Show will be held there. This is the greatest organization of its kind in the world and will undoubtedly bring world-wide attention to the Eastern States Exposition. Along side of the United States and Canada there will be specimens of the 4,000,000 scrub cows which are to-day bankrupting New England and other American farmers.

Among the interesting features there will be accommodations in the buildings for the experiment stations and

"THE COLLEGE"

Editorials

Are the usual capers to be cut for the benefit of the visitors during Junior week? Are we going to be favored with a minstrel or with a little vaudeville of high class? Now is the time to get going if anything of the sort is to be attempted.

*

We wish to call the attention of our many exchanges to the fact that all are not reciprocating with their publications. We recently revised our list very carefully to make sure that every one who favoring us received a copy of the *Campus* and incidentally added a considerable number of new exchanges. We would like to have you look up the matter and see that we are on your exchange list. In regard to the high schools throughout the state perhaps all do not have papers, but if they do we are anxious to receive them, as it is the policy of the College to keep in close touch with all the high schools throughout the State. Think it over.

*

We are a small college here at C. A. C., but there has been noticed more and more the tendency to club together and neglect the opportunities for wider acquaintance and fellowship among the men of the different societies or of the different types. We are allowing our membership in the so-called fraternities to defeat the purpose of the dormitory system which is to produce a democratic homogeneity rather than several groups of men sufficient unto themselves. Privacy is perfectly all right but when it reaches the extreme of snobbishness it is time to stop, look around and try to correct our faults by opening up our hearts to the other fellows rather than shutting our doors in their faces and ripping them up the back. Recently an attempt has been made to bring the fraternities closer together in a representative body but this has come

to nought simply because there is no interest in the movement except on the part of one or two clubs who have a selfish consideration in the consolidation. There are only two clubs in the College which habitually keep open house. We all know who they are for it is in their rooms that all the class and inter-class smokers have been held this year. The others hold aloof. Why is it that when there are no secrets to lose and everything to gain the rooms are closed to the profane and opened only to the elect? Perhaps we have not so much democracy to boast of here at Connecticut as we might have thought at first when we look into affairs a little more thoroughly.

A LOCAL BAEDEKER

(Continued from page 1)

turns sharply at the lower falls. At the turn a pile of stones marks the spot where an Indian named Washington once had a turning mill and made wooden plates and trenches. Below this spot is a fine hemlock grove, a delightful picnic ground, which has not been used for many years.

A LARGE APPLE TREE.

A few rods below Judge Storrs' barn on Spring Hill stands what is, according to Prof. A. G. Gulley, the largest apple tree in the United States. In diameter it is over three feet, its height is sixty and its spread fifty feet. It is impossible to determine its exact age but as near as can be reckoned it is 150 years at least.

FIFTY-FOOT.

Turning to the left just this side of the town hall at Spring Hill and following a lane and wood-path for about three-quarters of a mile brings us to Fifty-foot. This is a favorite picnic ground and the terminus of many excursions from the college. The ledge is considerably greater in height than its name would indicate but the early inhabitants of the "Land of Steady Habits" were not so inclined to exaggeration as are many of the later ones.

HANKS HILL.

To reach this quiet little hamlet turn to the left at Kings' corners and take your first right. It may also be reached via the Hotel and Steinmauers or by way of Spring Hill but the above is the easiest. The only object of interest here is a small insignificant building standing on the dam of the mill-pond. This is the first silk mill ever built in the United States and is now over one hundred years old. On the opposite side of the wall stands the spinning mill of Mr. Ozro G. Hanks. The many little mills scattered all through the Fenton river valley are reminders of the days when the silk industry was closely confined to a few regions of New England. An attempt was made at one time to raise the silk-worms locally and this explains the presence of so many mulberry trees in the neighborhood.

THE INDIAN'S POT.

This freak of nature, sometimes called the "Devil's Cauldron," is located on the ledge high above the saw-mill at the lower dam in Gurleyville. It can only be reached by a round-about path and unless guided by a previous visitor you may lose much

Visit Our New Store

Perhaps you do not know that today our store is second to none in this vicinity in its ability to meet your needs. Plenty of light, plenty of air, plenty of room and a variety of ready-to-wear goods for ladies that will surprise you.

J. B. Fullerton & Company

time and many steps in finding it. When the glacial flow melted and the waters rushed to the Atlantic a stone was caught in a crevice in the ledge and was whirled around and around in the eddy until it was worn out or jumped out. In this manner, geologists tell us, this and other "pot-holes" were formed.

CODFISH FALLS.

This spot is perhaps most familiar of all to the students at the college although of late it has not been visited as often as of yore. It is about one-half mile north of Gurleyville between the road and the Fenton river. Where the name "Codfish" came from is a mystery. Surely there are no cod there as "Limber" has never brought back anything but trout! To the Gurleyvillites or Gurleyvillians the place is known as "The Glen" and so it is best to get your bearings from the college unless you want to land in Mt. Hope or Warrenville.

SOUTH WILLINGTON.

For those who delight in a long walk perhaps the best route would lay up the Willimantic river valley to Stafford or in that direction. The Epileptic Colony is known to all of us except the timid co-eds, but how many have ever seen that model town of South Willington? This quasi-metropolis is well laid out and blessed with a mill affording work to all. Almost a "Spotless Town" or a Utopia. The Memorial Church is built of native granite and the visitor will be delighted with the interior. The barns on Col. Hall's farm are models of perfection, though not of economy, and are in charge of two C. A. C. men. The only draw-back is that the town has so far been unable to avoid occasional visit of freight on the C. V. road, known far and wide as "the worst run and most rundown road in the U. S. A." This, however, is not true, for the man who said that never rode on the Storrs-Willimantic Trolley.

COVENTRY LAKE.

This spot is a favorite after the dancing-pavilion is opened and also for "house parties" up the lake. In the cemetery above the grove stands the monument to Nathan Hale, the "Martyr Spy." Perhaps it is fortunate after all that his body was never recovered for now his rest is never disturbed by the revelry going on under the hill. Beyond Coventry street and up on Dimock's hill stands Hale's birth-place, but the only place where relics are exhibited is at the library in the village, a pretty little structure modeled after Independence Hall.

A fraternity composed exclusively of two-year-men and called Alpha Tau Alpha has chapters at the State Colleges of New Hampshire and Rhode Island.

RURAL ORGANIZATION

(Continued from page 1.)

dominating agricultural organization in the Northeastern section of the Country; the Farmers' Educational and Co-operative Union, which is very strong in the South; the Gleaners, who are particularly strong in Michigan and parts of adjoining States; and the American Society of Equity, which is strong in the entire Northwest, besides many smaller organizations. These various movements toward an effectual organization of rural interests have been very uneven in their results, with many conspicuous failures as well as successes. Not one of them seems to have found the key to universal success in this direction. The Federal Government, we trust, may yet assist the farmers in the formulation of principles of organization which shall give permanency and consistency to the energies and efforts now frequently mis-directed and actualize the ideals of social equity and justice as applied to rural life.

The rural districts everywhere are honeycombed with fraternal and social organizations. There are also vast numbers of organizations to promote special agricultural interests. There are mutual insurance companies, farmers' mutual telephone companies, co-operative creameries, cheese factories, and elevators, co-operative stock companies of various kinds, cow-testing associations, breeders' associations of various kinds, purchasing associations for securing better prices on fertilizers, seed and feed-stuffs, co-operative stores dealing in general merchandise, co-operative ware-houses doing business aggregating tens of millions of dollars annually. And yet there is need of the application of a principle which shall bring together all these thousands of scattered movements and systematize the work for the farmer in order that failure may be diminished and the success and prosperity of the agricultural population may be secured. The Rural Organization Service of the Department of Agriculture may possibly become one of the most effective agencies for bringing about this larger and more universal co-operation and organization of all the farmers of the Country.

Co-operation is taking the place of individualism also in farm life. Farmers are learning that by co-operation they improve their business methods and secure better results from their labor. The movement is prompted by a constructive desire for well understood economics and as a measure of protection against unjust extortion and fraud committed by human parasites that feed upon the products of the farmer's toil.

It is to be hoped that with the growing intelligence of the people the principle of co-operation in production, marketing, selling and in all other directions will soon be effectively applied and comprise within one comprehensive organization every agricultural community throughout the length and breadth of the land. The farmers disorganized are the prey of every scheming individual and corporation and have naturally been victimized since the day when clever individuals learned to combine for the purposes of exploitation. We trust that with the growing consciousness of the futility

of individualism in our complex civilization the transition to an organized and efficient rural life will be speedy, as it certainly will be most gratifying and satisfactory.—American Lutheran.

GRADUATE SCHOOL OF AGRICULTURE

(Continued from page 1)

periment stations for advanced study. At the time the school was inaugurated there was little chance for advanced study at any of the institutions prepared to cope with these problems and possessed of the apparatus to conduct agricultural practices. Conditions are better now and systematic graduated courses are being given in several of our leading institutions with excellent results. But to make the Graduate School of Agriculture valuable in every particular all interested in the promotion of agriculture should lend their support.

Agriculture can be made a wide-awake, active force, leading in domains of learning, instruction, investigations and vocations, rather than a passive agency which yields submissively to the unorganized, illogical, chaotic and transient whims of society at large.

It is hoped that many C. A. C. men will take advantage of the opportunities to be offered at Amherst this summer.

THE EASTERN STATES' EXPOSITION

(Continued from page 1)

agricultural colleges and the United States Department of Agriculture, that they may illustrate to those who attend the most up-to-date knowledge and methods.

The calendar of events for 1916 will include the Short Ship Circuit Races, under the management of the Springfield Driving Club, to be held on July 12th, 13th and 15th. October 12th to 21st, inclusive, are the dates set for the National Dairy Show Association of Chicago. On November 4th the Dartmouth-Syracuse football game will be held under the management of the Convention Bureau of the Springfield Board of Trade.

Commencement Week

PLANS BEING DEVELOPED WITHOUT A HITCH.

All things point to the exercises to be held next June at Commencement and assure us that they will be the best ever. Two additional evenings are filled and now the program admits of no further festivities. On the evening of June 9th the President and Mrs. Beach will hold the usual reception to students, faculty, visitors, and the community. On Saturday evening, June 10th, the Dramatic Club plans to put on another play which will show visitors what the club can accomplish in this line. The plans for Class-day are completed and this feature is to be one that no one can afford to miss if he has the slightest acquaintance with or interest in the class of 1916. In regard to the class reunions arrangements are not entirely completed. The committee hopes to have all the "ones"

and "sixes" return but all have not as yet signified their intentions. The celebration of the 35th anniversary of the founding of the College which takes place on Monday evening, June 12th, will bring back many alumni, old trustees and faculty men. A very interesting program is in store. Accommodations for visitors in June are going to be crowded and all who can plan that far ahead had best do so at once.

The man patted a strange bull-dog to see if the critter was affectionate. The pup wasn't.—Zanesville Signal.

KEEP YOUR RAZOR SHARP

Don't blame the razor if it dulls quickly. May be it's your fault. Rub a few drops of 3-in-One oil on your razor strop. When leather is pliable strop as usual. Any razor will cut easier, better and stay sharp longer. After using, draw blade between thumb and finger moistened with 3-in-One. This prevents rust, keeps edge smooth and keen, always sharp and ready for immediate use. Don't scrape your face. Use 3-in-One on your razor and shave right.

Campus Notes

All the departments are now busy with their spring work and with the recent unwelcome but energy-giving rains all the campus begins to take on a new lease of life.

How many of us know that the latest news, the weather probabilities and the baseball scores may be obtained every evening by wireless? "Bert" Crawford has improvised his antennae and has installed a wireless set capable of receiving messages from Cape Race and Arlington. Communications will be established with Berlin and Paris as soon as the funds are forthcoming!

All through the past winter the Thursday afternoons and evenings have been livened up by the institution of "Ye Olde Tyme Tea-Room," managed by the Ladies' Circle, at the home of Mrs. E. O. Smith. Although some went with fears of breaking dishes and spotting the floors all were made comfortably at home and served with the best of refreshments by the most accommodating waitresses. One of the novel plans hit upon by the ladies was to invite the men by groups on Frat. Days, and in this way even the most timid were attracted. The proceeds are to go for improvements in the church and as the season has been very successful these will soon be noted.

As plans are to date the contest for the Hicks Prize Orations will be held in the Hawley Armory, May 11th. Hereafter this contest is to be made a feature of Junior week and it will in all probability attract more and closer competition as the years go on.

Blake's men are removing the storm-windows from the various buildings about the campus while at the same time Dan Flaherty is making screens for some of the inhabitants of Mosquito Terrace.

The festivities of Junior week will be somewhat curtailed this year because camp week follows so closely upon the dance. The battalion leaves Eagleville Sunday morning the 14th of May by a special train for New London in order that the aspirants for next year's honors may have their trials in the field.

Studies were called off the Monday morning after Easter and most of the men on the Hill took advantage of this to get away for a few days. Those that remained scattered to all the churches in the suburbs for the Easter services or else slept copiously.

At Wisconsin the Senior girls living in dormitories are given special privileges. One is that of using their own discretion about staying out until 11 o'clock. At the opening of the spring semester, the Senior girls are required to sign a list of regulations, and are then given a dormitory key. The presentation of the keys is always a great event among the Seniors, and scarcely one refrained this time from the novelty of staying out after hours without permission, and opening the great closed door with a "Senior key."

A Homeless Department

THE MECHANICS ARTS COURSE GREATLY HANDICAPPED.

With the development of the college and the enlargement and improvement in the several branches of instruction one department has been overlooked. The course in Mechanic Arts has since its foundation been tucked away in "attics and cellars" as one person was heard to express it, and has been forced to hide its light under a bushel.

While our sister institution at Amherst boasts it is the only college in the country teaching agricultural subjects exclusively the Rhode Island and New Hampshire State Colleges subordinate scientific farming for engineering courses. The Granite State hopes to have a state university as the Home Economics course is now well developed and a course leading to a B. A. degree is to be instituted next year.

Still we plod along in indifference while in the Mechanic Arts there is a fine field for development. It has been rumored that the course is to be thoroughly revised and considerably strengthened and we sincerely hope it is so. There are many young men now in machine-shops in the State who would be much benefited by a course such as is now given here and with but a little improvement it might rival the I. C. S.

The building now used as a dining-hall was originally planned for a building to house the M. A. department. The time will soon come when a new dining-hall and new methods of administration in it will be necessary. Let us hope that a few years advance, then, will see a new mess-hall and a course in Engineering or Mechanic Arts to which we may point with pride.

The girls at Wisconsin who are athletically inclined observe strict training regulations. Eight hours sleep each night, only one dance a week, no "eats" between meals except graham crackers or plain ice cream, only one piece of pie or cake at a meal, and no tea, coffee or candy at any time, are a few of the rules.

"Natco On The Farm"

is the title of our new book that every farmer who takes pride in his farm buildings should have. It shows with many fine illustrations the use of Natco Hollow Tile for barns, houses, corn cribs, etc. Send for it. Study it. Also get our Silo Catalog and learn about the money-saving, worryless, repairless

Natco Imperishable Silo

"The Silo That Lasts for Generations"—that perfect ensilage preserver that can never blow down, decay, warp, crack, crumble or burn. So efficient that a great demand for other Natco buildings was created and they are now springing up everywhere. Send for these books. Ask for free plans and advice. Let us save you money for years to come. Write now.

Power for Forty Farms

Mogul and Titan Engines

TWENTY Titan engines of all sizes, all kerosene burners, were lined up in front of the I H C dealer's store at Litchfield, Minn., one day last summer. That day their new owners took them out to supply good, reliable power on twenty farms. A few months later Litchfield saw twenty more farmers take Titan engines out to their farms.

Two big I H C engine delivery days in that town last year. In many hundreds of towns you will find this same popularity of I H C Mogul and Titan engines—the best farm power—Grand Prize winners at San Francisco.

You must have an engine—then buy an International Harvester engine—Mogul or Titan. It will keep down your fuel and repair bills, deliver the most power with least trouble, and save you more hard work than you can realize now.

International Harvester engines are made in all approved styles, sizes from 1 to 50-horse power, operating on low as well as high-grade fuels. Some local dealer near you handles Mogul or Titan engines. If you don't know him, drop us a line. We'll send you full information, and make it easy for you to get the best farm engine made.

An Equitable Adjustment

As to there being an equitable adjustment of cleaning service and cleaning cost in

no one will dispute, at least no one who has ever given it a thorough and fair trial. You owe it to yourself to investigate Wyandotte Dairyman's Cleaner and Cleanser if you have not already done so.

It Cleans Clean

The Blue Pencil

A number of the Wesleyan football squad are to spend the summer training in a lumber camp in Northern Canada. Perhaps they had in mind their date with C. A. C. when they took this extreme measure.

At the University of Nevada an annual Labor Day is declared early in the spring when the entire student body turns out for work on the athletic field and track.

Rhode Island State has adopted "The Rube" as its mascot. At every game some unfortunate freshman dressed like a scarecrow appears on the athletic field to cheer on the Little Rhody warriors.

Two days' suspension is the penalty for a Wisconsin Freshman if he is caught in a saloon. One of our exchanges from a Prohibition State thinks it should be two months for the neophyte and two years for the upper classman who led him there.

They do things at the University of Kansas. Recently when a newly married Professor returned from his honeymoon he was pleasantly surprised to receive congratulations from each member of one of his classes as he called the roll for the first time.

Freshmen who shack Co-eds at R. I. S. C. are ostracized for varying lengths of time according to what girl they were seen with.

The Connecticut Junior Republic located at Litchfield, publishes a monthly paper called the "Junior Republic Citizen." The accounts in it in regard to punishment of offenders against the laws of the Junior Republic are very interesting.

The captain of baseball at the University of Texas for this year is a one-armed left-fielder. Last season out of 105 chances he made no errors. And yet some one has dared to say that our nine was a bunch of cripples.

Kent (to the clerk at the co-op):
"I want some penny pencils?"
The Clerk: "How many?"
Kent: "How much are they?"

TOBACCO.

Tobacco is a dirty weed,
I like it.
It satisfies no normal need,
I like it.
It makes you thin, it makes you lean,
It takes the hair right off your bean,
It's the worst darn stuff I've ever seen,
I like it. —Exchange.

Villain: "Where are those papers?"
First Assistant Villain: "In the blacksmith shop!"
Villain: "Ha, ha—I supposed being forged?"
First Assistant Villain: "No, being filed."—Exchange.

For the first time in over a thousand years the University of Cambridge, England, is on the verge of closing. The medical school is the only department with enough students to run.

The Smoke of the Active!

There's one fashion that never changes—the refreshing, wholesome, youthful, spirited fashion of "rolling your own" for a lively smoke with good old "Bull" Durham.

In no other way can you get a cigarette so fresh and fragrant, so full of vigor, energy and action. The man who "rolls his own" with "Bull" Durham has the taste of a connoisseur.

GENUINE

"BULL" DURHAM SMOKING TOBACCO

The wonderful mildness of "Bull" Durham sets it apart from all other tobaccos, and its unique mellow-sweet flavor gives distinctive enjoyment to a cigarette.

"Bull" Durham is made of "bright" Virginia-North Carolina leaf—the choicest that grows. It is smooth, rich, most satisfying—and mild.

Start "rolling your own" with "Bull" Durham now, and you'll put yourself on the one right road to genuine smoking satisfaction.

TOBACCO
COMPANY

There is a difference between fruit growing and forestry

yet most of the directions for fruit growing are directions for producing rapid wood growth only.

This means coming into bearing late and irregular bearing on account of lack of enough available mineral plant food to raise a crop of fruit and to set strong fruit buds in the same season.

POTASH

Two years before the trees are expected to come into bearing the annual application of minerals should begin, using 50 to 100 pounds Muriate of Potash and 100 to 200 pounds of bone, acid phosphate or basic slag per acre.

Potash improves the flavor, shipping quality and keeping power as well as the yield of fruits.

Write us for Potash prices and for free books with formulas and directions.

"Cod-fish Falls"

Perhaps there is no more familiar place in Mansfield, to the students, than Cod-fish Falls, which is about one-half mile north of Gurleyville. Although each student may know where they are, I think it best to give their location, as some poor fellow might take the wrong road and find himself at Chaffeeville, instead of the falls.

At the falls, the towering pines, the rush of water over the rocks, and the songs of the birds, makes the whole a pleasant place to while a way an idle hour, while looking for botany specimens, or perhaps listening to the music box, turned by the power of the falls (this being the latest attraction).

Where the falls got the prefix Cod-fish is a mystery still unsolved. surely cannot be because any cod has been found there, as the peaceful trout holds full sway in the quiet pool below the falls.

To the inhabitants of Gurleyville and vicinity the falls are known only as "The Glen," and when a new student or professor inquires for Cod-fish Falls of a Gurleyvillite he is as likely to be directed to the wild woods of Westford as to the place he is seeking. So beware of getting lost, when you inquire of any one in that vicinity for Cod-fish Falls; it is much better to get the right start from C. A. C.

When the summer school is in session, the falls are especially well patronized. Hardly a day passes without its visitors.

There is an abundant growth of ferns and flowers near the falls; they will serve as good specimens for botany collectors.

If there are any of the students who have not as yet visited the falls they will be well paid by taking a stroll there on a Sunday afternoon in the "Good Old Summer Time."

NANCY, '06.

When you are inclined to criticise any man for being too aggressive, remember that no one ever worked his way along the path to success at a faster rate than the crowd, without bumping into a few people.

LITTLE TRAGEDIES.

The man speeded up to see if he couldn't beat the train to the crossing. He couldn't.—Columbia State.

The man struck a match to see if the gasoline tank in his automobile was empty. It wasn't.—Cincinnati Enquirer.

The man looked down the barrel of his gun and pulled the trigger to see if it was empty. It wasn't.—Charlotte News.

The man asked the girl to marry him to see if she was engaged. She wasn't.—Nashville Banner.

The bum asked the slim, pretty man for a quarter to see if he was broke. He was.—Montgomery Advertiser.

The toper said he could drink it or let it alone.

He didn't.—Harvard Crimson.

The old maid looked under the bed to see if there was a man there. There wasn't.—Florida Alligator.

Crowley peeked over the back stop to see if Moss had any thing on the ball. He did.

Prof.: "Well, Baron, how did you pass your exams?"

Simp.: "With E's, Doctor, with E's."

Boost and the world boosts with you, Knock and you're on the shelf;

For the world gets sick of the one who'll kick,

And wishes he'd kicked himself.

Boost for your own achievements,

Boost for the things sublime,

For the one who is found on the top-most rung,

Is the BOOSTER, every time.

The staff of the Gopher, the annual book published by the students of the University of Minnesota, have inaugurated a unique scheme for selling the issue. In each college, prizes of money and valuable presents are offered to the student turning in the most subscriptions. On the first day, 1,644 subscriptions were taken, and the Minnesota Daily is running a thermometer on the first page of its issue, showing the gain each day. Here is co-operation and PUSH that should be an example for any college that is less alive.

The milk in the pail the cow kicks over is lost forever

AND the butter-fat that goes into the can through the skim-milk spout of a cheap, inferior or worn-out cream separator is just as surely lost as the milk in the pail the cow kicked over. If you are trying to get along without a cream separator, or with an inferior or worn-out machine, you are losing butter-fat right along and butter-fat is money.

Get Your DE LAVAL Now — Right Away

every day you use it it will be paying for itself out of its own saving.

If you haven't the spare cash right now that need not hinder your immediate purchase.

We have an arrangement with De Laval agents which makes it possible for any reputable farmer to secure a De Laval on the partial payment plan—a small payment at time of purchase and the balance in several installments, so that a De Laval really pays for itself while you are using it and getting the benefit from it.

SUMMER SCHOOL of Agriculture and Nature Study.

Recent appropriations have provided additions to lands, buildings and equipment valued at \$650,000. Expenses low. No tuition charge to residents of Connecticut. Military instruction. A catalog will be sent upon request.

CHARLES LEWIS BEACH, President.

Settle the Silo Question

—and settle it for good. Do away with repairs, with tightening of lugs and adjusting of hoops. Know that your silo won't blow over. Be sure of perfect silage at all times. Build the worryless, efficient

Natco Imperishable Silo

"The Silo that Lasts for Generations"

Its hollow, vitrified, clay tile are impervious to air and moisture—they preserve the silage sweet and juicy. The dead air spaces in the wall resist frost—making it the silo for severe climates. The continuous, reinforcing bands laid in the mortar hold it in a grasp of steel. It is a silo of efficiency, and a silo you'll be proud of. Send for our silo catalog describing it fully.

Also get our splendid new book, "Natco On The Farm," describing other farm buildings made of Natco Hollow

Tile and just as efficient. Both books free. We have many farm building plans to submit, and

will help you solve your building problems, free. What are you going to build? Let's hear from you. Write today.
